### B.TECH ACADEMIC PROJECT.

**Title** : Efficient Computation of Range Aggregates Against Uncertain Location Based Queries Based Queries.  
**Operating System** : Windows 7.

**Tool** : .NET.  
**Duration** : 3 months

**Description:**

The main aim of this project is to provide much better performance than MMD with the help of a small amount of pre-computed statistic information. When more space is available, PCR and APF have better performance than MMD and STF. Compared with PCR, our experiments show APF can achieve a better trade-off between the filtering capability and the space usage.
